Click together hexagon LED lamp. Perfect for garage, homegym, workshop or similar. There is room for wiring underneath the individual segments and holes in the corner pieces to feed the wires to the led strips.

I am using 12v natural white led strips from ali with 1200 leds per 5 meters https://www.aliexpress.com/item/1005002355317307.html?spm=a2g0o.order_list.order_list_main.5.7f2279d2mBYwmp

The led strips are pretty bright but could have been a bit brighter imo.

if anyone know of some good high lumen 12v led strips, please feel free to dm me!

I am using 10x2mm flat aluminum profiles as heatsinks underneath the led strips.

Make sure to either power infuse or run wires that power a limited amount of hexagons. For 4 hexagons I run power for 3 individual strips.

I have printed the rails and corners in PLA and the diffusers in PETG.

No support needed.

Infill 15%.
